Program Specification: Update Inventory Added

Input:

student-record - The necessary information needed to create a student (i.e. student number, name, contact info)

Output:

class-attendance - The collection of student-records for a certain class

Program Logic:

```
DO
  READ next student-record
  FIND matching student-record
  IF matching student-record is found
    CONTINUE
  ELSE
    ADD student-record to the class-attendance
UNTIL End-of-file
```
