

ATTENDANCE CHECKER

Use Case Specification

Submitted to:

Asst. Prof. Ma. Rowena C. Solamo
Faculty Member
Department of Computer Science
College of Engineering
University of the Philippines, Diliman

Submitted by:
Choa, Jeremy Micah
Velasquez, Kenneth
Yao, Faneallrich Li

In partial fulfillment of academic requirements
for the course
CS 191 Software Engineering I
of the
1st Semester, AY 2016-2017

Unique Reference:

This document is stored in the project's requirements engineering folder in GitHub, found [here](#)

Document Purpose:

The purpose of this document is to exhibit the use case specification of "3.1 Add Student."

Target Audience:

The target audience is the CS 191 Instructor and the fellow team members on the assigned task.

Revision Control*History Revision:*

Revision Date	Person Responsible	Version Number	Modification
9/29/16	Velasquez, Kenneth V.	1.0	Initial Document;
9/29/16	Velasquez, Kenneth V.	1.1	Editing for compliance with use-case diagram document

Use-Case Name: Add Student

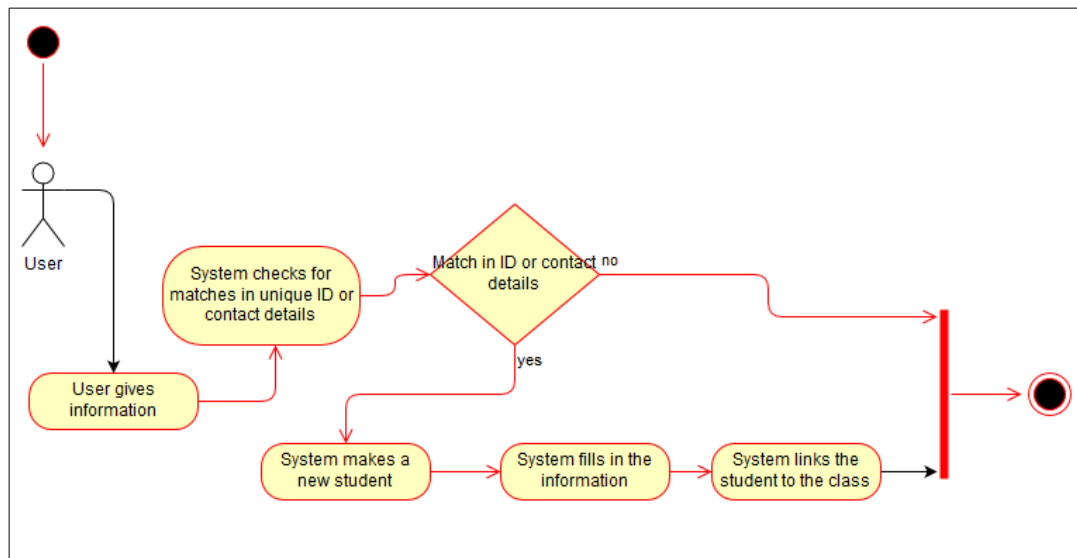

Description: *This describes the process of adding students to a class. There are two possible flows of activity that depend on the database. The flow depends on whether or not the student already exists in the database.*

Preconditions: *If the information provided for the student matches any in the database, then the program will not add another student with the same name. Otherwise, the student will be added to the database.*

Flow of Events:

Scenario Name	Description
Scenario 1 (Basic Flow) Student information provided did not match any in the database	1. The user provides student information 2. The system checks the database for any matches in the unique id or the contact details 3. If nothing matched, then a new student is created in the class. 4. The system fills in the information 5. The system links it to the class
Scenario 2 Student information provided matched one in the database	1. The user provides student information 2. The system checks the database for any matches in the unique id or the contact details 3. If one matched, then no student will be created

Activity Diagram of the Flow of Events:

Postcondition: *A student is added to the list of students within the class*

Relationships: *Subsystem of Maintain Student*

Special Requirements:
