# ATTENDANCE CHECKER

# **Use Case Specification**

#### Submitted to:

Asst. Prof. Ma. Rowena C. Solamo Faculty Member Department of Computer Science College of Engineering University of the Philippines, Diliman

> Submitted by: Choa, Jeremy Micah Velazquez, Kenneth Yao, Faneallrich Li

In partial fulfillment of academic requirements for the course CS 191 Software Engineering I of the 1st Semester, AY 2016-2017

System: Attendance Checker Page 1 Version: 1.1 Group: Team 6 Absenses]

### Unique Reference:

This document is stored in the project's requirements engineering folder in GitHub, found <a href="here">here</a>

#### **Document Purpose:**

The purpose of this document is to exhibit the use case specification of "1.1 Add Class."

## Target Audience:

The target audience is the CS 191 Instructor and the fellow team members on the assigned task.

#### **Revision Control**

#### History Revision:

Revision Date	Person Responsible	Version Number	Modification
9/28/16	Yao,Faneallrich Li	1.0	Initial Document;
9/29/16	Choa, Jeremy Micah	1.1	Editing for compliance with use-case diagram document

System: Attendance Checker Version: 1.1 Page 2 Group: Team 6 Absenses] Use-Case Name: 1.1 Create Class

Description: The user (henceforth called Prof) can create a class by providing its

name and number of sessions. This class is then added to the Prof's

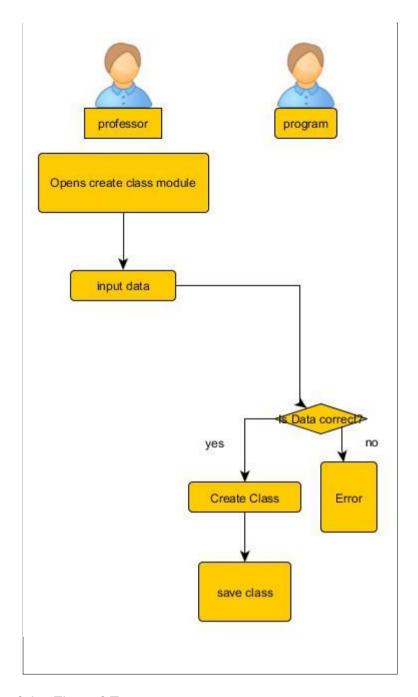

total classes. Classes must have unique names.

Preconditions: None

#### Flow of Events:

Scenario Name	Description	
Scenario 1 (Basic Flow)	1. The instructor opens the create class module.	
Instructor creates a class	2. The instructor inputs the data necessary for creating the specific class such as the name and number of sessions.	
	3. The program checks the data for errors and invalid input such as duplicate names.	
	4. The program saves the data input by the instructor.	
	5. The class is finally created.	
	6. The program saves the created class.	
Scenario 2	1. The instructor opens the create class module.	
Instructor fails to create a class	2. The instructor inputs the data necessary for creating the specific class such as the Name and number of sessions.	
	3. The program checks the data for errors and invalid input such as duplicate names.	
	4. The program found an error on the data input by the instructor.	
	5. The program fails to create a class and sends an error.	

System: Attendance Checker Version: 1.1 Page 3 Group: Team 6 Absenses]

Activity Diagram of the Flow of Events:

Postcondition: Either a new class is created, or no new class is created.

Relationships: This use-case extends "1.0 Maintain Class."

Special Requirements:
None
